Face Down DDoS Attacks with Confidence

MANAGED SECURITY

DDoS Mitigation

Prepare for Invasion Now

DDoS attacks have evolved beyond simple high-volume packet floods, designed to overwhelm a network, and now regularly employ more sophisticated techniques with multiple attack vectors designed to evade traditional DDoS protection. To fend off these attacks, you need a managed solution that recognizes these new threats and provides protection from the network edge to the server core.

360 Degree, Real-Time Defense

DataBank's Managed DDoS Mitigation solution leverages smart technologies to eliminate DDoS attacks in real-time, allowing friendly user traffic to flow uninterrupted and keeping your applications and services continuously online, even while under attack. Our solution also includes implementation, monitoring, and management around-the-clock by DataBank's security team so your teams are free to focus on issues that drive productivity and performance.

At-A-Glance

- Addresses all types of DDoS attacks including volumetric, stealthy, sub-saturating, state exhaustion and application layer attacks
- Protects against attacks at layers 3 through 7 including UDP/ICMP protocols, SYN/ACK, and DNS amplification
- Provides protection for both IPv4 and IPv6 traffic
- Detailed forensic reporting that eliminates false positives and provides context to prevent future attacks

DATABANK
Data Center Evolved™

MANAGED SECURITY

DDoS Mitigation

*Cloud and appliance-based options available

Features

- Scalable, always-on protection with real-time responsiveness to DDoS attacks
- Clear, actionable reporting and alerting of threats across the network
- On-demand, post-attack forensic reports
- Multi-layered, adaptable, and tunable protection against all DDoS threats including those that target UDP and ICMP protocols, SYN/ACK, DNS amplification and Layer 3 thru 7 attacks
- Cloud-based mitigation options leverage global scrubbing center locations

Benefits

- Fully-managed solution that frees your team from procurement, updates, maintenance, training, licensing, and certification
- Simplifies compliance requirements for FedRAMP, PCI-DSS, and HIPAA/HITECH
- Eliminates false positives and provides context needed to prevent further attacks
- Reduces downtime, maintains application performance and keeps users productive
- Global scrubbing centers enable high capacity and high availability
