STORAGE AS A SERVICE

A FAST, EFFICIENT WAY TO INCREASE STORAGE CAPACITY

Taking on storage is a complex endeavor. Purchasing, staging, configuration and supporting storage hardware are all part of the process, and depending on the volume of data and retention requirements, it can be expensive. Public cloud storage options are sometimes worth considering, but retrieval charges often accompany them, and not all businesses feel comfortable relying on cloud storage.

Data is the lifeblood of your business, and digitalization is ensuring that data volumes continue to multiply exponentially. Your IT organization deserves an efficient, cost-effective method to augment storage capacity. Partnering with a data center expert who can deliver elastic data storage capacity and management capabilities multiplies the forces of your IT team and reduces expenses.

DataBank Storage as a Service provides quick turnaround of secure, resilient, redundant, and encrypted storage for DataBank colocation customers. The solution physically resides in existing colocation facilities, ensuring security and compliance.

STORAGE AS A SERVICE WITH SECURITY, RESILIENCY AND REDUNDANCY BUILT IN

DataBank Storage as a Service is a storage solution that provides encrypted storage for colocation customers with security, resiliency and redundancy built in. Storage as a Service is accessible via physical cross-connect in DataBank data center locations, which eliminates costly retrieval charges and any potential concerns decision makers may have with public cloud storage options. This solution is an excellent fit for colocation customers who require additional storage capacity and a fast, efficient way to increase it.

DataBank Storage as a Service removes the financial burdens of expanding storage clusters and enhances security and compliance. Running out of local SAN space, fielding the costs of purchasing new SAN and leaning on IT analysts to manage storage are obstacles of the past.

DATABANK STORAGE AS A SERVICE SOLUTION DETAILS	
SAN on demand: multi-tier storage options, from high performance to long-term archival	✔ Cost effective and efficient solution to storage space
2-3 day SLA	✔ Save CAPEX and rapid deployment
Fully supported and managed service	✔ Save OPEX with no need to hire someone to run it
Off-site encryption and replication	✔ Physical and virtual security reduces risk (HIPAA, PCI)

- Reduce CAPEX and OPEX by eliminating the need to purchase and manage additional SAN
- Opt for a consumption-based pricing model to maximize efficiency
- Ensure security and compliance by relying on a storage solution located in existing colocation facilities
