

Cloud Direct Connect

UNLEASH THE POWER AND SCALE OF YOUR PUBLIC CLOUDS

Effortless Access to Public Cloud Providers

Without secure access to public cloud providers, your business is missing the opportunity to use the cloud to enable digital transformation, foster innovation, and establish operational resilience. At the same time, traditional carrier circuits often come with long-term contracts, and they can be slow to provision. Not to mention, hardware costs associated with multiple cross-connects add up rapidly. With the right solution, you can gain the full power of cloud computing by bridging the connection between your environment and public cloud providers without sacrificing control or security.

Achieve a Secure, Private Connection to Hyperscale Cloud Providers

DataBank's Cloud Direct Connect is a secure, fully private connection between your infrastructure located in DataBank's data centers and hyperscale cloud providers. DataBank partners with Megaport, PacketFabric, and other SDN-based elastic interconnection solutions, to facilitate access from DataBank data center locations to a wide range of public cloud providers.

AT-A-GLANCE

- 1G and 10G ports; Layer 2 and Layer 3 options
- Access to secure, private connectivity between broad geographic regions
- Provides elastic connectivity to increase/decrease bandwidth at any time
- Connect to multiple cloud regions and providers from a single interconnection for redundancy
- Provision connections on-demand
- Rapidly scale hybrid environments across colocation, DataBank's cloud, and hyperscale solution providers

KEY BENEFITS

REDUCES LATENCY

INCREASES STABILITY

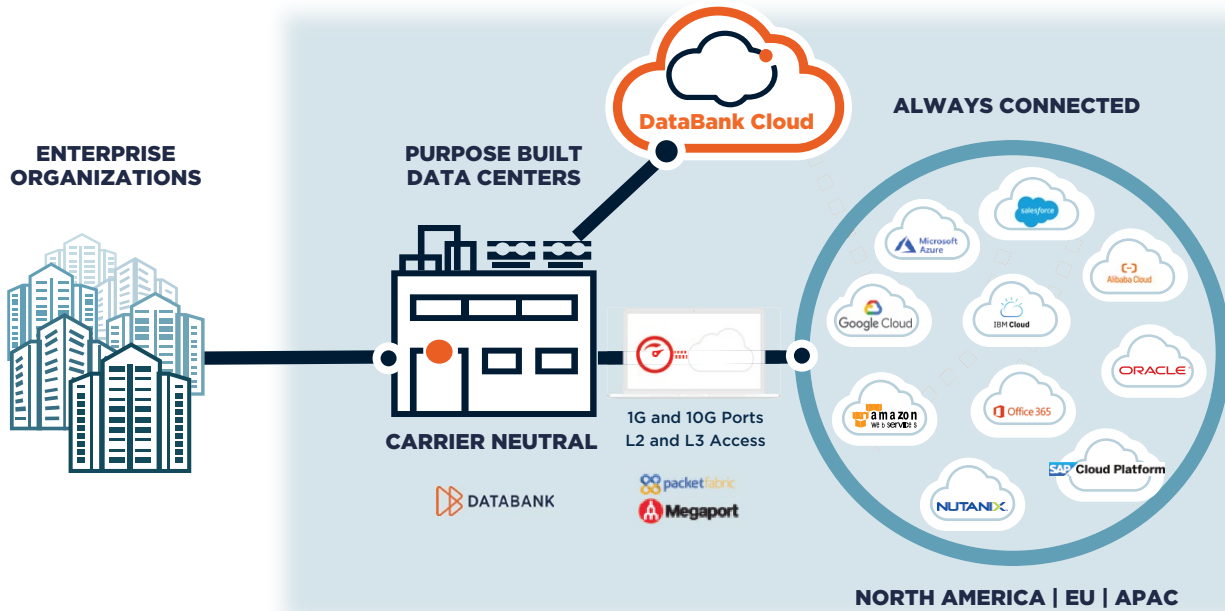

REDUCES COST

QUICK PROVISIONING

CLOUD DIRECT CONNECT SOLUTION DETAILS

Features

- 1Gb and 10Gb port options for cross-connect
- Layer 2 and Layer 3 options
- Connections are secure and fully private
- Flexible connectivity from within DataBank colocation facilities and cloud environments to hyperscale cloud providers
- Fast provisioning
- Rapid scalability

Benefits

- Reduces ingress/egress fees typically charged for Internet access
- Provides fast, low-latency, direct connectivity
- Increases speed-to-market for scalability of bandwidth because these SDN-based solutions are already provisioned to the hyperscale service providers
- Eliminates the rigidity of network services that don't align with the fluctuation of your workloads and application demands
- Provides flexibility as your business needs evolve
- Allows you to leverage DataBank's economies of scale and investment in infrastructure
