

DataBank METAL™

SOLUTIONS

Bare Metal

The Power of Bare Metal. The Flexibility of Hybrid IT.

Public cloud introduces hidden costs and lock-in. Colocation demands capital expense and long lead times. Other bare metal providers rely on third-party facilities. DataBank METAL™ changes the game — giving you more performance than competing solutions at the same cost, with servers deployed in hours, not weeks.

DataBank METAL™ combines the performance of dedicated servers with the agility of the cloud — and the option to grow into our full suite of hybrid IT services. From operating systems to applications, you're in control.

At-A-Glance

- Configure BIOS Settings
- Set up in-chassis storage
- Load operating systems and hypervisors
- Deploy custom images and container management
- Monitor uptime and performance

RAW POWER. TRANSPARENT PRICING.
