

Security Starts at the Perimeter

Detect and Remediate Threats in Real Time

IT infrastructure security starts at your network edge, and it's under attack by ever-evolving constellation of cyber threats including zero-day vulnerabilities, malware, ransomware, and phishing. Protecting that perimeter can challenge even the best resourced IT teams, and many others simply lack the time, resources, expertise and tools to keep policies up to date, detect threats, and remediate them in real time.

A Comprehensive Solution

Intrusion detection and prevention services (IDS/IPS) are a crucial element of perimeter protection. DataBank's IDS/IPS service is designed to identify and block malicious traffic, prevent lateral movement of malware, ensure network availability, and enhance network performance. Backed by DataBank's security teams, our service frees your staff, speeds up response times, and aids in compliance.

MANAGED SECURITY

IDS/IPS

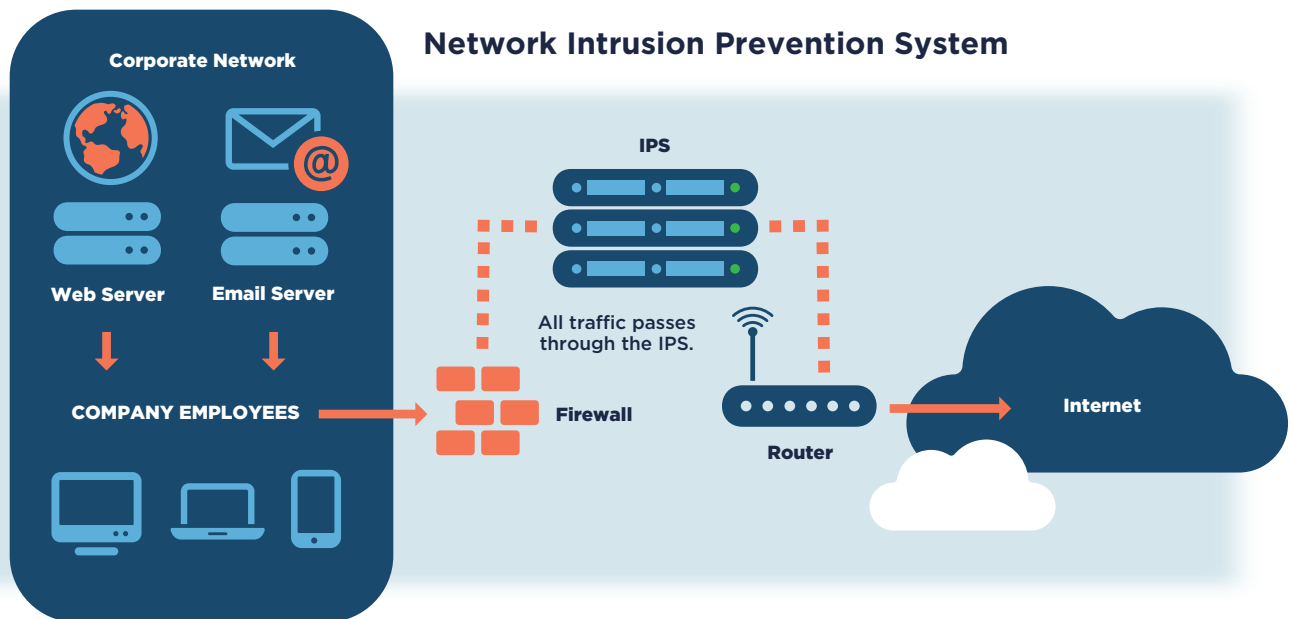

At-A-Glance

- Machine learning and statistical data modeling to adapt to threat changes over time
- Deep packet inspection, malware filters and analysis on a flow-by-flow basis
- In-line inspection that provides protection without impeding network performance
- A threat and URL reputation database that identifies bad IP addresses, DNS names, and URLs
- Rules for blocking malware-infected machines from contacting their command and control (CnC) hosts

DATABANK
Data Center Evolved™

Features

- Instant response, no user intervention required
- IP Reputation and Digital Vaccine Subscriptions
Comprehensive threat protection against known and undisclosed vulnerabilities
- Deep packet inspection and threat reputation
- URL reputation and advanced malware analysis SSL inspection
- Enterprise vulnerability remediation
- Asymmetric traffic inspection
- Virtual patching

Benefits

- Simplifies compliance requirements for FedRAMP, PCI-DSS, and HIPAA/HITECH
- Provides the context needed to understand, triage, troubleshoot, and block malicious attacks before they spread
- Defends your hosted infrastructure in real-time from the network edge to the data center to the cloud
- Frees your team from the burden having to evaluate solutions, procurement, updates, maintenance, training, licensing, and certification
